# HTML Basic Examples

Don't worry if these examples use tags you have not learned.

You will learn about them in the next chapters.

## HTML Documents

All HTML documents must start with a document type declaration: `<!DOCTYPE html>`.

The HTML document itself begins with `<html>` and ends with `</html>`.

The visible part of the HTML document is between `<body>` and `</body>`.

### Example

```
<!DOCTYPE html>
<html>
<body>

<h1>My First Heading</h1>
<p>My first paragraph.</p>

</body>
</html>

# HTML Headings

HTML headings are defined with the `<h1>` to `<h6>` tags.

`<h1>` defines the most important heading. `<h6>` defines the least important heading:

## Example

```
<h1>This is heading 1</h1>
<h2>This is heading 2</h2>
<h3>This is heading 3</h3>

The link's destination is specified in the `href` attribute.

Attributes are used to provide additional information about HTML elements.

You will learn more about attributes in a later chapter.

# HTML Images

HTML images are defined with the `<img>` tag.

The source file ( `src` ), alternative text ( `alt` ), `width`, and `height` are provided as attributes:

## Example

```
<img src="w3schools.jpg" alt="W3Schools.com" width="104" height="142">
